

Amitec Scalar Network Analyser SNA05

Amitec SNA05 Technical Specifications

Amitec Model SNA05 scalar network analyzer is designed to allow you to actually SEE the Electronic Spectrum in "real time". It can be used for analysis in frequency domain to get the complete picture. The modulation products and sidebands of AM, FM, SSB, DSB, DSB-SC, VSB waveforms can be studied. The frequency range and high sensitivity is suited to EMI/EMC measurements, both radiated and conducted. This aids both identification of signals, particularly background, and the location of problem emissions. A tracking signal source along with directional coupler can be used to measure any two port network. Different training modules are provided for study and experimentation.
